Intelligent Security System

Version: 020409

Introduction

The proposed Intelligent Security System will enable anyone who wants to secure his or her property to do so without losing a night's sleep. The Intelligent Security system will not only see and record the presence of intruders but also decide on the appropriate action to take unlike other passive security systems. The system will use a high-resolution camera with night vision, a digital video recorder and a normal computer.

System Outline

The High-Resolution camera

The Hi-resolution camera is an outdoor color surveillance video camera with the latest imaging technology. It delivers one of the most reliable and accurate quality pictures in the security industry. It is ideal for monitoring or recording your outside environment. The Hi-resolution camera is built to withstand all the elements of nature. Rain, snow, or the hot sun will not deter the camera from sending clear video. Additionally, its design incorporates a weatherproof metal casing with an "O" ring seal to keep the high-resolution lens and the internal parts safe from nature. With 36 infrared LED's that activate at night, the camera provides black and white night vision up to 100 meters away in total darkness. No need to hire a security guard. Let this High Resolution Weatherproof Color Camera be your vigilant eye.

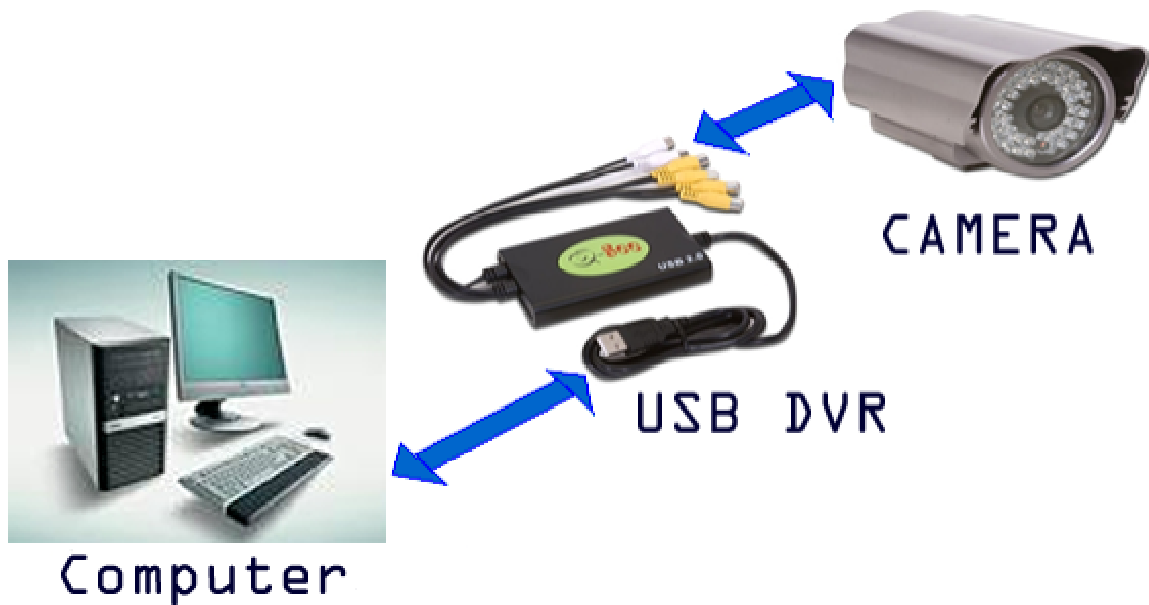

The DVR Digital Video Recorder

The Digital Video Recorder is a multi camera device used to connect any Hi-resolution camera to a desktop or laptop via the USB port. The user can then record live video from the camera connected onto the computer hard drive. The Digital Video Recorder also has two audio channels used to capture any sounds that might be picked by the cameras, to enable multimedia video capture.

System Outline

The Complete Intelligent Security System

Features

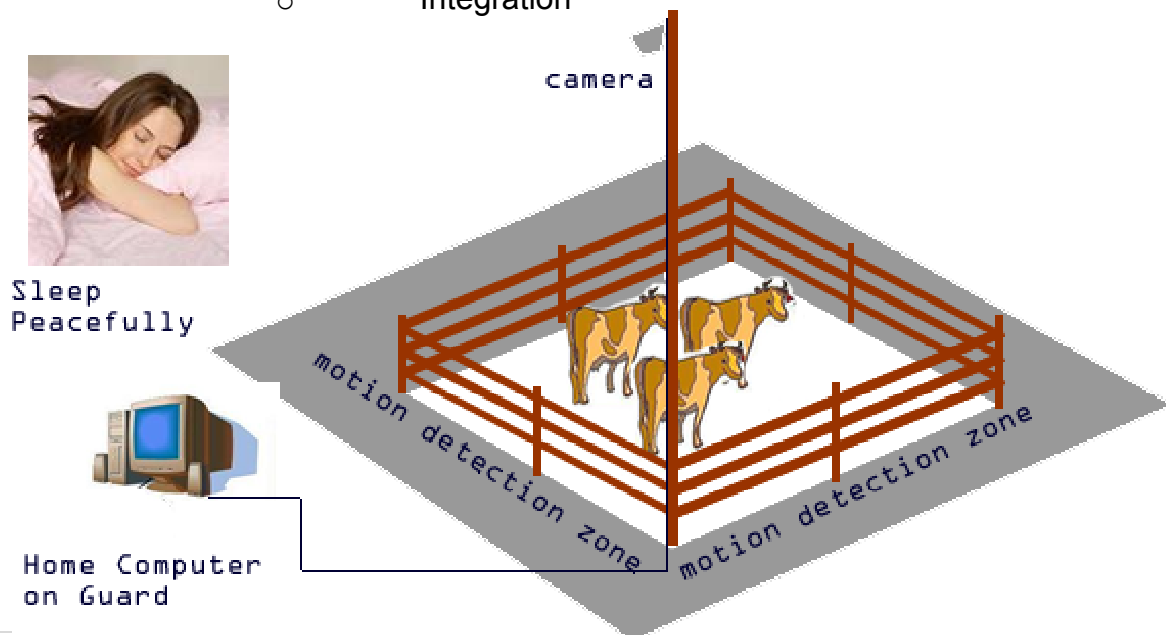

- Records live video from the camera connected onto the Hard drive in PC.
- Multi-alarm triggering methods: sensor alarm, motion detection, video loss and HDD sources shortage.
- Supports schedule and motion detection recording mode.
- Video compression format: MPEG4. Conserves Hard drive space.
- Recording frame rate range from 1 to 30 fps adjustable for each channel.
- Supports up to 16 cameras for surveillance and playback.
- Search by time/date and recording event
- Support remote surveillance and Pan Tilt Zoom control through web browser
- Can send e-mail and SMS notifications when it detects an intruder.

Deliverables

Basic Plan:

This system monitors an area of radius of 25 meters at night and 100 meters during the day. This is adequate for most paddocks and other animal enclosures.

1. Business Analysis. (clarifies your challenges and problems)
2. Hardware Installation
 - Single Security Camera
 - 80m from computer, 25 meters radius of night vision**
 - Single Computer Installation and configuration
 - Single DVR Setup
3. Software Installation
 - Intelligent Security Software
 - One Day Training of Key Users.
 - Support Services. (To be paid for separately)
 - Integration

Deliverables Cont`d

Premium Plan:

With this system you can monitor a radius of 100 meters at night and 150 meters during the day.

1. Business Analysis. (clarifies your challenges and problems)
2. Hardware Installation
 - Multi Security Cameras

100 meters night vision

- Single Computer Installation and configuration
 - Single DVR Setup
 - Larger scale installation
3. Software Installation
 - Intelligent Security Software
 4. One Day Training of Key Users.
 5. Support Services (To be paid for separately)
 6. Integration

Quotation

Basic Plan

Cost: K7.100.000 (if you already have a computer)

Premium Plan

Premium Plan single camera first 100 meters

Cost: K8.200.000 (if you already have a computer)

Payment Terms:

1. At least 50 % with order.
